Phase One - Evidence Collection

1) Photographs of Evidence

Upon arrival at the crime scene, I collected one USB thumb drive located on the first row of computer workstations in the right corner. I took multiple photographs of the USB drive in its original position prior to moving/touching it.

Photographs include

- wide-angle photo showing overall scene and location of the thumb drive
- mid-range photo showing proximity to surrounding objects
- close-up photos of the front & back of the thumb drive

2) Evidence Label Completion

After taking photos, I completed the evidence label and signed off on the chain of custody. Professor, J. Stauffer checked the label for accuracy and completion. Then I taped the label to the front of the envelope.

3) Securing the Evidence

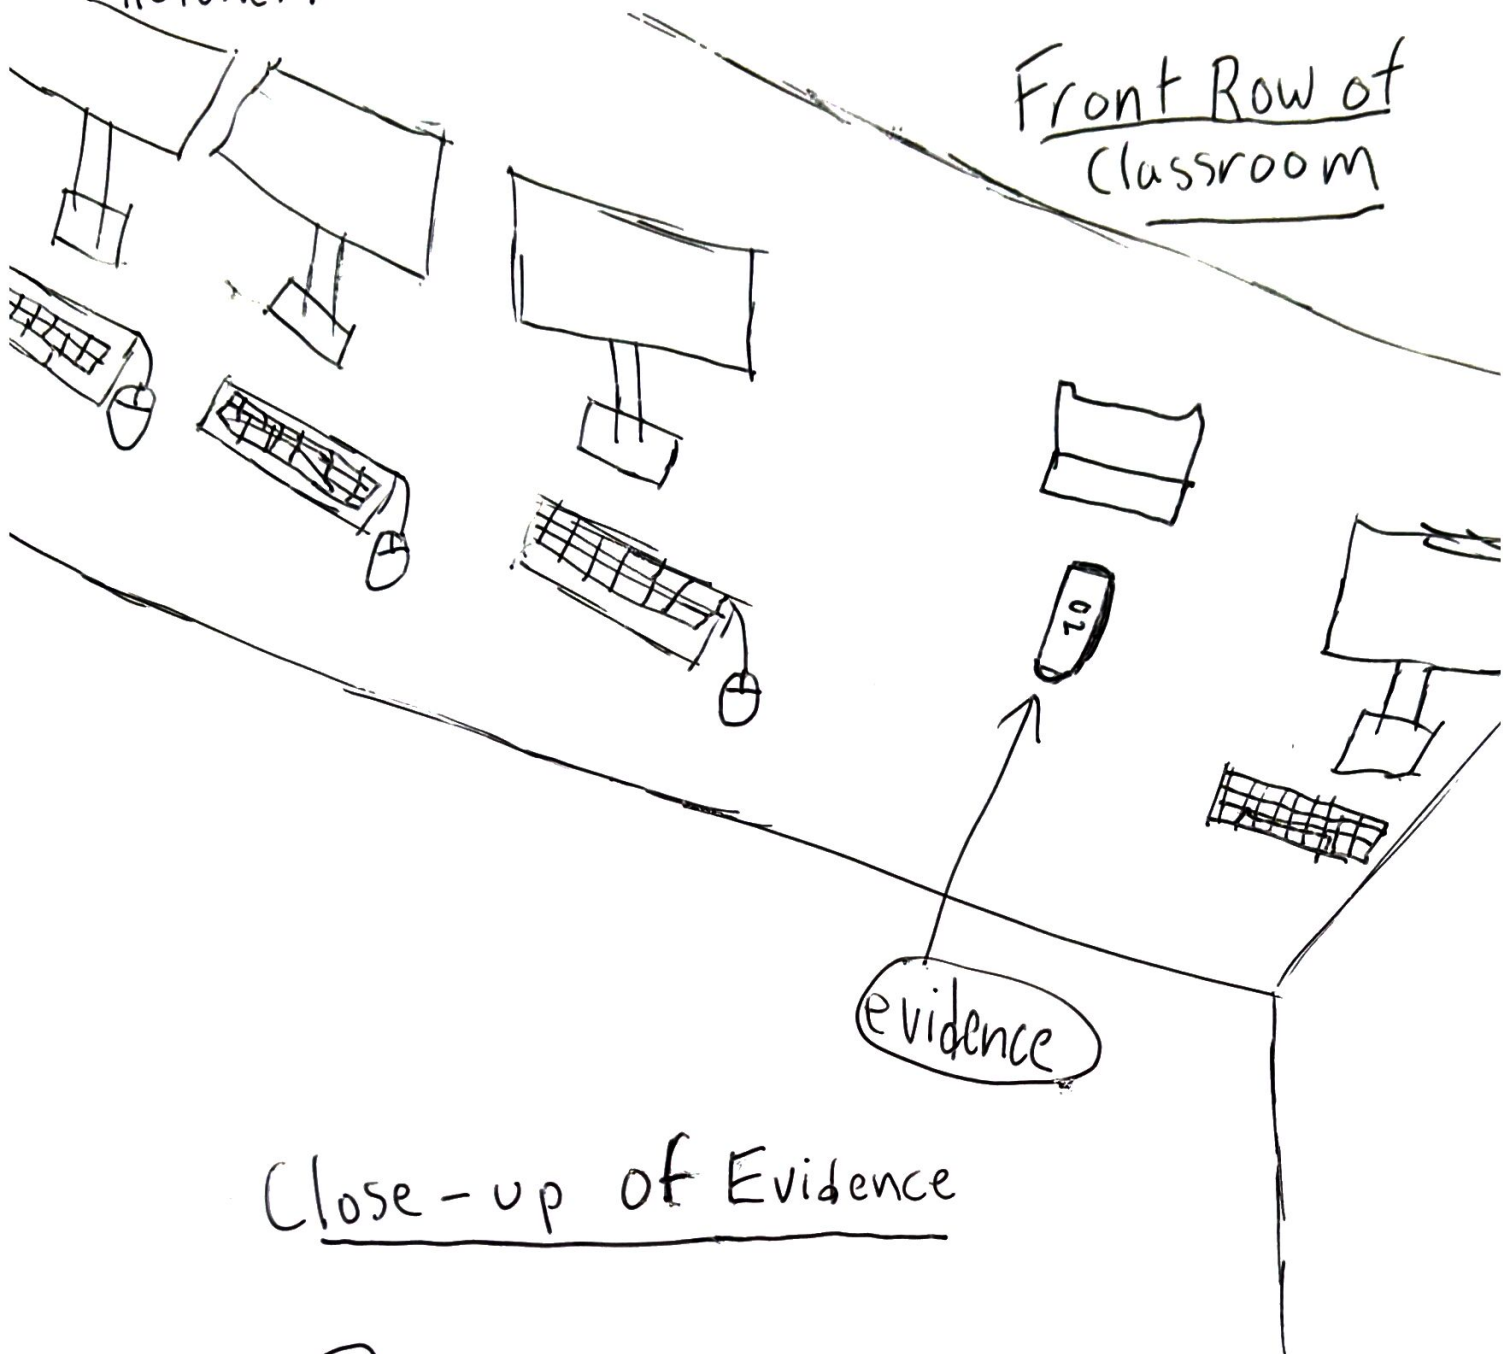

The USB thumb drive was then placed into the evidence envelope. Then, I sealed the envelope closed with evidence tape. Lastly, I took photographs of:

- Front of the evidence envelope
- Back of the evidence envelope

4) Storing the Evidence

After collection, preservation, and documentation of the evidence, I stored the evidence at my apartment. This is an approved storage facility, approved by J. Stauffer.
